Composited Block For Glass Kiln Pond Bottom

1, Main technical parameters of the product

ITEM	UNIT	Working layer	Insulation layers
Al ₂ O ₃	%	≥45	≥43
Fe ₂ O ₃	%	≤1.5	≤1.5
R ₂ O	%	≤1.0	≤1.0
Density	g/cm ³	≥2.20	≤1.5
Porosity	%	≤18	≤50
Cold crushing strength	Mpa	≥50	≥20
Refractoriness	°C	1750	1730
Refractoriness under load	°C	≥1400	≥1250
Change rate of reheating line 1000°C*2h	%	±0.1	±0.3
Thermal conductivity 1000°C	W/m.k	≤1.10	≤0.42

2,Brief introduction:

The Glass Kiln Pond Bottom Composited Block supplied by our company is composed of two parts, working layer and heat insulation layer. The working layer of the product is effectively utilized, the heat insulation layer effectively protects the loss of heat energy, effectively controls the reduction of liquid temperature in the molten

pool, improves the product quality and production efficiency, and reduces the production cost. It has been used in nearly ten glass kilns, and has received excellent use effect.

3, Characteristics:

1) The product is composed of dense working layer and heat insulation layer, which effectively reduces the heat storage capacity of the product, improves the temperature in the molten pool, and improves the product quality and productivity

2) The energy-saving effect is more significant than that of full heavy products, and the production cost is saved

4. Application: For glass tank furnace bottom paving

5, Good feedback of product use effect, the products have been exported to South Korea, Russia, Pakistan

6, We are a professional supplier, who can provide customers with free product technology, use and other issues

Do you want to find a professional supplier of refractory products?

Do you want to find a professional supplier of graphite electrodes?

Do you want to find a stable and credible supplier?

Then let's contact with jinggan company
